

Extensions care

Congratulations on your investment!

Here are some of my best tips to help keep your extensions looking their best.

Do's:

- Detangle wet hair starting at ends
- Hold the top of the weft with your hand as you're brushing to make sure you don't snag the thread
 - Use a hair mask as **LEAST** 1x every 2 weeks
 - Use Heat Protectant **ALWAYS**
- Blow dry hair 80% dry with your hand before using a brush
 - Air drying is totally fine, just dry the tops of your extensions to avoid issues, also make sure your hair is dry before going to bed
- Sleep with **freshly** brushed hair and braids or a loose bun
 - Wear a tight braid or bun at the beach, when swimming or in super windy conditions
 - Sleep on a SILK pillowcase

Don'ts

- Don't use sunscreen with Avobenzone or Oxybenzone, it will turn your extensions peach and will not come out, plus that ingredient is bad for the coral reefs.
- Don't get your extensions wet in the ocean or pool, however, if you choose to: SATURATE your hair in a conditioner or mask, or with tap water and immediately wash your hair after swimming
- Don't use high heat on your blow dryer or hot tools
- Never sleep on wet hair (this will cause matting and painful tangles that can ruin your hair)
- Do not use purple shampoo or conditioner on extension hair (unless I tell you otherwise.)
- Don't use products that I don't approve, extensions are sensitive and certain ingredients can harm them.

Please remember that hand-tied extension hair is sensitive, it also doesn't lie, I will be able to tell if you are truly following my suggestions. I have had some clients whose hair has lasted 1 year and 2 months, so I know it's possible, but you **HAVE** to take amazing care of them!
